

BLOCK CAP

Deslauriers introduces the first UNBONDED CAPPING SYSTEM for compression testing of concrete masonry units!

- Convenient and uncomplicated.
- No mixing, cutting or measuring.
- Clean and economical, saving time and labor.
- Accurate and consistent. Based on comparison tests this unit indicates excellent results versus capping with hydrocal gypsum performed according to ASTM C140.

Patent 7,415,890

The block cap compression pad is a fibrous composite laminated to tough plastic sheeting.

The composite flows into the irregularities of the CMU, thus distributing the test load uniformly-with no damage to the cell stems. The plastic sheeting provides rigidity and provides protection to machine platens.

CAT#: BC08 --8"x16" CMU, 10 sets/carton

CAT#: BC12 --12"x16" CMU, 10 sets/carton
