

New! **THE COVER CAP**

SPEND LESS, COVER MORE!

CAT#: COVER

The Deslauriers Impalement Safety Cover Cap System is designed to cover in-line exposed rebar.

The Cover Cap System only requires two units for every 8 feet of coverage (2 units per 4 feet in California). The Cover Cap holds two 2x4's suspended above a line of rebar, eliminating the need to cap each rebar.

Cap can also be used on a single rebar to provide protection. The Cover Cap System consists of Cal OSHA approved DISC10F and PCA.

Approved by California OSHA #C1718AG and OSHA 1723AG.

Each Impalement Safety Cap is stamped with the California OSHA approval number as required by CAL-OSHA.
