

DATA LOGGER

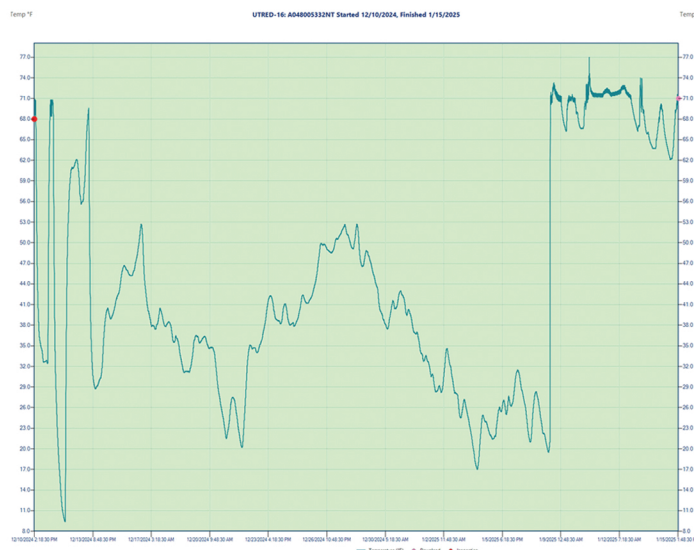

THE DESLAURIERS DATA LOGGER (CAT#: DL) is a fully configurable, multi-use USB PDF temperature recorder/data logger with built in display. It can create temperature reports without the need to install proprietary software or hardware.

- Select data can be viewed directly on the display without the need for a PC.
- Temperature range -30°C to +65°C (-22°F to +149°F).
- Up to 16,000 recordings - enough for 168 days at 15 minute logging.
- Display showing temperature and alarm status of up to 6 alarms.
- Statistics memory (for display on LCD): Max/Min values and alarm duration values.
- A detailed PDF report of the recorded temperature data and alarms are automatically generated without any proprietary software using the integrated USB plug.
- Can be connected to any computer with a USB port. No interface cradle required.
- Powered by standard replaceable battery - one year battery life under normal use.
- No external probe required.
- Deslauriers wall mount bracket available (CAT#: DL-wall).
